Final Report • October 2002

Road Equipment Procurement and Utilization Study

Abstract

This study has investigated the procurement and use of construction and maintenance equipment owned or leased by public entities in Iowa that receive road use tax moneys. The findings are provided as a basis for the Iowa Department of Transportation's recommendation to the Iowa General Assembly as required by 2001 Iowa Acts, chapter 32, section 12, subsection 2.

An equipment list was the foundation of a fill-in-the-box survey that collected information regarding number of pieces purchased or leased, procurement method, and percentage of use for maintenance and construction. Both paper and electronic versions of the survey were sent to a total of 378 entities that receive road use tax moneys: all counties in Iowa, all cities in Iowa with populations greater than 5,000, all cities in Iowa with populations between 2,000–5,000, a sample of cities in Iowa with populations less than 2,000, and state agencies including the Iowa Board of Regents institutions, Iowa Department of Natural Resources, Iowa DOT, and all state correctional facilities.

Most of the equipment subject to the survey was purchased rather than leased (99% versus 1%). Procurement policies vary depending on the responding entity. A formal bidding procedure is typically used for larger agencies such as cities with populations greater than 5,000 and the Iowa DOT. Smaller cities tend to purchase equipment used. Results reveal most of the purchased equipment is used for maintenance (94.1%) rather than for construction (5.9%). Most agencies used their equipment with utilization rates around 80% on average. Small cities appear to underutilize equipment, with utilization rates averaging 42%.

Recommendations based on the study results are provided to enhance the procurement process for entities receiving road use tax funds. In order to encourage equipment sharing between agencies, a list of an agency's equipment could be made available so that other organizations could have access. Procurement policies could also be modified such that equipment is selected based on the lowest life-cycle cost as opposed to the lowest initial bid price.

The opinions, findings, and conclusions expressed in this publication are those of the authors and not necessarily those of the Iowa Department of Transportation.

CTRE's mission is to develop and implement innovative methods, materials, and technologies for improving transportation efficiency, safety, and reliability while improving the learning environment of students, faculty, and staff in transportation-related fields.

ACKNOWLEDGMENTS

The authors wish to acknowledge several people who have been instrumental in assisting in this project. We especially thank Kevin Mahoney and Larry Jesse at the Iowa Department of Transportation.

The advisory committee members were very helpful in providing guidance on the survey instrument. The advisory committee consisted of the following people:

- Carol Coates, Iowa Department of Transportation
- Larry Jesse, Iowa Department of Transportation (Committee Chair)
- John Klostermann, City of Dubuque
- Larry Mattusch, Scott County
- Dwayne McAninch, McAninch Corporation

We thank Ali Kamyab at the Center for Transportation Research and Education for his assistance in preparing the electronic version of the survey. We also appreciate the dedication of Ben Johansen, Erik Johansen, and Zhili Gao who helped collect the data and enter them into the spreadsheet and ensure that the numbers were accurate.

Thanks to Elizabeth Baird of the Iowa Department of Transportation for her careful review of the report.

We are especially grateful to Ian MacGillivray for his support.

EXECUTIVE SUMMARY

This study has investigated the procurement and use of construction and maintenance equipment owned or leased by public entities in Iowa that receive road use tax moneys. The findings are provided as a basis for the Iowa Department of Transportation's recommendation to the Iowa General Assembly as required by 2001 Iowa Acts, chapter 32, section 12, subsection 2 (House File 324, 2001 session). This legislation states that "The department shall review the highway and street construction and maintenance equipment procurement policies and the use of such equipment by all entities receiving road use tax fund moneys. The department shall report its findings, and any recommendations regarding potential efficiencies and cost savings in the procurement and use of such equipment, to the general assembly by December 31, 2002. The department shall consult with public and private entities in reviewing the procurement policies and use of equipment and in formulating the department's recommendations."

An oversight committee was established composed of Iowa DOT staff, a representative of the Associated General Contractors of Iowa, a city representative, a county representative, and others as suggested by the core group. This oversight committee was used to test for sensitive issues, review the survey instrument, and provide guidance on the project.

As a first step in survey instrument development, a list of motorized and non-motorized equipment valued at \$5,000 or more was prepared. Functionally similar pieces of equipment were grouped into categories to keep the list as short as possible. The equipment list was the foundation of a fill-in-the-box survey that collected information regarding

- number of pieces of equipment purchased or leased
- procurement method
- normal procurement cycle
- percentage of use for maintenance and construction
- open-ended questions and comments as desired by the committee

The survey was pretested by a combination of five city, county, and state department of transportation representatives. Both paper and electronic versions of the survey were sent to a total of 378 entities that receive road use tax moneys:

- all counties in Iowa (99)
- all cities in Iowa with populations greater than 5,000 (89)
- all cities in Iowa with populations between 2,000–5,000 (78)
- a sample of cities in Iowa with populations less than 2,000 (This category included 798 cities. Researchers decided to select 100 of the cities using a random sampling approach.)
- state agencies that receive road use tax moneys, including the Iowa Board of Regents institutions (one survey covered all state universities), Iowa Department of Natural Resources, Iowa DOT, and all state correctional facilities (12)

A total of 246 surveys were received, representing a 65% response rate. Survey data were entered into a spreadsheet and analyzed using appropriate statistical methods.

Most of the equipment subject to the survey was purchased rather than leased (99% versus 1%). Procurement policies vary depending on the responding entity. A formal bidding procedure is typically used for larger agencies such as cities with populations greater than 5,000 and the Iowa DOT. Direct purchase was also a popular method of purchase for most of the responding entities. Smaller cities tend to purchase equipment used. Leasing characteristics also vary depending on the entity. Larger cities (with populations greater than 5,000) typically entered into long-term contracts with a maintenance agreement. The Iowa DOT and state correction facilities typically used short-term leasing arrangements (less than six months).

Results reveal most of the purchased equipment is used for maintenance (94.1%) rather than for construction (5.9%). Equipment used primarily for construction purposes included road mixers, asphalt pavers, water tank attachments, and road rating machines.

Although the research team did not receive a substantial amount of data related to equipment utilization efficiency, most agencies used their equipment with utilization rates around 80% on average. Small cities (with populations less than 2,000) appear to underutilize equipment, with utilization rates averaging 42%.

Respondent comments provided information regarding suggestions for procurement procedures. In particular, it was mentioned that low bid is not always the best approach and equipment sharing is a suitable approach when equipment is not used very much.

A few recommendations based on the study results are provided to enhance the procurement process for entities receiving road use tax funds. In order to encourage equipment sharing between agencies, a list of an agency's equipment could be made available so that other organizations could have access. This could help increase the equipment utilization rates of all organizations. Procurement policies could also be modified such that equipment is selected based on the lowest life-cycle cost as opposed to the lowest initial bid price.

INTRODUCTION

2001 Iowa Acts, chapter 32, section 12, subsection 2 (House File 324, 2001 session) states that the Iowa Department of Transportation (Iowa DOT) shall review the use of construction and maintenance equipment owned or leased by public entities that receive road use tax moneys in Iowa, and provide a recommendation for improved efficiency to the Iowa General Assembly.

The Iowa DOT retained the Center for Transportation Research and Education (CTRE) at Iowa State University to conduct a survey on construction and maintenance equipment procurement and use in Iowa and report the results. The study report provides a sample listing of equipment owned by cities, counties, and other government institutions that receive road use tax fund moneys, a description of the equipment's use (construction versus maintenance), and information on equipment procurement practices and policies.

Summary of Legislation

2001 Iowa Acts, chapter 32, section 12, subsection 1 requires the Iowa DOT to define the terms "construction," "reconstruction," "improvement," and "repair or maintenance." This has been done (see Appendix A), and the definitions will be used in the work specified by subsection 2.

2001 Iowa Acts, chapter 32, section 12, subsection 2 states the following: "The department shall review the highway and street construction and maintenance equipment procurement policies and the use of such equipment by all entities receiving road use tax fund moneys. The department shall report its findings, and any recommendations regarding potential efficiencies and cost savings in the procurement and use of such equipment, to the general assembly by December 31, 2002. The department shall consult with public and private entities in reviewing the procurement policies and use of equipment and in formulating the department's recommendations."

Initial Project Meeting

An initial project meeting was held on October 9, 2001, to discuss the need to review highway and street construction and maintenance equipment procurement policies as outlined by 2001 Iowa Acts, chapter 32, section 12, subsection 2. Attendees included

- John Adam, Iowa DOT
- Steve Andrie, CTRE
- Elizabeth Baird, Iowa DOT
- Carol Coates, Iowa DOT
- Ed Jaselskis, CTRE/Iowa State University
- Larry Jesse, Iowa DOT
- Kevin Mahoney, Iowa DOT

The meeting was beneficial because it helped identify important considerations for the study and provided needed information to define the scope of work.

Scope of Work

The project's scope of work consisted of five tasks:

1. Establish an oversight committee composed of Iowa DOT staff, a representative of the Associated General Contractors (AGC) of Iowa, a city representative, a county representative, and others as suggested by the core group. This oversight committee will be used to test for sensitive issues, review the survey instrument, and provide guidance on the project.
2. Prepare a survey including a list of motorized equipment valued at \$5,000 or greater. Functionally similar pieces of equipment will be grouped into categories to keep the list as short as possible. Send the survey to a representative sample of Iowa transportation agencies that receive road use tax funds.
3. Enter survey results data into a database for analysis. Analyze data and represent results using appropriate tables illustrating the percent of use of each type of equipment for maintenance and construction, whether leased or owned, and how procured.
4. Prepare and submit a draft final report to the study committee for review. Following review of the draft report, submit a final version.
5. Support Iowa DOT staff as needed in preparing a presentation to the Iowa General Assembly.

Advisory Committee

The advisory committee was formed of the following members:

- Carol Coates, Iowa DOT
- Larry Jesse, Iowa DOT (Committee Chair)
- John Klostermann, City of Dubuque
- Larry Mattusch, Scott County
- Dwayne McAninch, McAninch Corporation

Deliverables

The project deliverables are

- paper and electronic survey instrument
- data files
- 25 copies of a draft final report
- 25 copies of a final report

SURVEY DEVELOPMENT

Drafting the Survey

An equipment list was the foundation of the fill-in-the-box survey instrument. The survey asked at least the following questions about each equipment category:

- number of pieces leased or purchased
- percentage of use for maintenance and construction
- procurement method
- normal procurement cycle
- open-ended questions and comments as desired by the committee

An advisory committee meeting was held (on December 10, 2001) to review a draft copy of the survey. The committee reviewed the survey to ensure that the proposed approach satisfied the legislative intent. The overall survey instrument was reviewed along with the equipment categories and proposed collection and analysis methodologies. Several substantive comments were received from the advisory committee. As a result of this meeting, several corrections were made to the survey instrument. There was also discussion regarding the survey respondents.

Description of the Final Survey

Both paper and electronic survey instruments were designed. The final version of the survey (see Appendix B) contained survey definitions, survey instructions, a worksheet for determining percents of use and worksheet instructions, and a three part equipment survey as described in more detail below.

Survey Definitions

The following terms, used in the survey, were defined for the respondents as follows:

“Equipment” is defined as self-propelled equipment and non-self propelled equipment (not including snow and ice control equipment or truck bodies) with a purchase or replacement value of more than \$5,000. (It was also possible for respondents to add equipment that was not listed.)

“Maintenance” is the preservation of a road, street, bridge, or culvert so that it is in sound or proper condition. For purposes of the survey, maintenance included minor repair, replacements, and additions necessary to restore the road, street, bridge, or culvert to its originally built condition with essentially the same design, and removal of snow and ice from roadways and other winter maintenance activities.

“Construction” includes improvement, reconstruction, or new construction of a road, street, bridge, or culvert. For purposes of this study, construction included

- work that increases the value of the facility and enhances the facility, its traffic operations, or its safety beyond the original design and may involve rehabilitation, restoration, or resurfacing (3R) type projects;
- work that significantly changes the existing type of road, street, bridge, or culvert or its geometric and structural features and may involve some realignment and use of current design criteria; and
- the building or development of a road, street, bridge, or culvert in a new location when the new location deviates substantially from the existing alignment and the result is an entirely new road or street for the greater part of the length involved.

“Equipment equivalent” is the number of pieces of equipment in use. For example, a grader’s time can be allocated such that 0.75 “equipment equivalents” are used for maintenance and 0.25 “equipment equivalents” are used for construction during a specified season.

Survey Instructions

A detailed list of instructions was provided to assist the completion of each portion of the survey.

Worksheet for Determining Percents of Use and Worksheet Instructions

A worksheet, along with an example, was included for determining the percents of use.

Equipment Survey Part 1: Equipment Procurement and Use Information

A list of equipment was identified from several sources. A primary source was an Iowa DOT report related to fleet management assessment (Griffith and Associates 1997). The report is the result of an independent review of the state’s fleet operations in response to the Governor’s Blue Ribbon Task Force report that identified potential cost savings opportunities in the management of the state’s fleet of vehicles and equipment. The document presents an assessment identifying the strengths and weaknesses in several functional areas of fleet management, and offers recommendations to advance fleet performance. Self-propelled (“A”) and non-self-propelled (“B”) equipment classes used by the Iowa DOT were also reviewed by the research team (Iowa DOT 2001c and Iowa DOT 2001b, respectively). In addition, a schedule of equipment rates from the Federal Emergency Management Agency (FEMA) was also consulted (FEMA 1998).

In Part 1 of the survey, respondents were asked to identify equipment owned in 2001. As part of the instructions, respondents were advised of the following procurement definitions:

- “Formal bid” is new equipment purchased through a formal bidding process in which specifications were issued and competitive bids were formally received and opened.
- “Direct purchase” is new equipment purchased without going through a bidding process. Informal price quotations may have been requested or new equipment purchased from a typical supplier.
- “Existing contract” means new equipment was purchased through state contract or other cooperative volume purchase arrangement.
- “Purchased used” is used equipment purchased directly or at auction.

Respondents were also asked to identify leased equipment in 2001. They had to enter the number of pieces (a) leased for more than six months with a maintenance contract, (b) leased for more than six months with no maintenance contract, and (c) rented for six months or less.

Equipment Survey Part 2: Innovative Suggestions or Good Practices for Equipment Procurement and Use

A space was provided for suggestions regarding innovative and/or good equipment procurement and use practices.

Equipment Survey Part 3: Respondent Information

The form asked for respondent name, title and organization, and contact information.

Survey Pretest and Refinement

The paper survey was pretested by five individuals representing various transportation agencies as follows:

- Tom Donahey, Iowa DOT
- Jim George, Dallas County
- Brett Hodne, City of West Des Moines
- Randy Krauel, City of Carroll
- Wade Weiss, Green County

The pretesters generally thought the survey was appropriate and was clear and relatively straightforward to complete. One pretester mentioned that it seemed long and included too much detail regarding the type of equipment. As a result of the pretest, the researchers made a few enhancements to the survey. One change was to “lock” certain columns where calculations were made, whereas the original version allowed respondents to erase equations in the spreadsheet. A reminder to respondents to save an extra copy in case something happened to the disk in the mail was also added.

DATA COLLECTION AND ANALYSIS METHODS

Data Collection

On January 28, 2002, 378 surveys were distributed to the following entities that receive road use tax funds:

- all counties in Iowa (99)
- all cities in Iowa with populations greater than 5,000 (89)
- all cities in Iowa with populations between 2,000–5,000 (78)

- a sample of cities in Iowa with populations less than 2,000 (This category included 798 cities. Researchers decided to select 100 of the cities using a random sampling approach.)
- state agencies that receive road use tax moneys, including
 - Iowa Board of Regents institutions (one survey covered all state universities)
 - Iowa Department of Natural Resources (Iowa DNR) (1)
 - Iowa DOT (1)
 - all state correctional facilities (9)

All recipients received a mail version with a cover letter signed by the director of the Iowa DOT (see Appendix B). For convenience, a Microsoft Excel spreadsheet with the questions was also e-mailed to the respondents so that they could complete the survey electronically if preferred.

Several respondents requested clarification on some points related to inclusion of snow removal equipment and equipment included as part of this study. Snow removal equipment was to be included to the extent that the truck body, for example, was used for maintenance or construction. The research team also provided clarification regarding equipment of interest in this study by stating that we were interested in equipment that was purchased using road use tax moneys, in part or whole.

By the end of March 2002, the research team had received approximately 150 completed surveys. A reminder card was sent out soon thereafter to encourage people to complete the survey. Some people claimed that they had not received the survey or had lost it. In either case, we resent the survey to them. By the middle of June 2002, a total of 246 surveys were received. Some clarification was required regarding the responses, and the necessary follow up was initiated. It should be noted that a small number of surveys sent via floppy disk (approximately 16) were damaged. The research team was able to obtain another version of the survey from some but not all of these respondents.

Data Analysis

All data were entered into a common Microsoft Excel spreadsheet prior to the data analysis phase. Data from the paper surveys were manually entered, and information from the electronic surveys was imported using software commands. Once these data were completely entered into the spreadsheet, it was necessary to “clean up” the database by correcting obvious transcription errors. In some cases, clarification was required and respondents were contacted to obtain additional information. Appropriate statistical techniques were used to analyze the data; these included calculating averages and percentages and performing data counts.

RESULTS

Results from the data analysis are provided in this section (Appendix C contains the data file).

Respondent Information

Table 1 shows the survey response characteristics. Of the 378 surveys sent out, 246 were returned, representing a 65% response rate. Note that counties and cities with populations less than 2,000 had the highest percentage response rates (74% and 73%, respectively) of the cities/counties surveyed. Cities in the 2,000–5,000 population range had the lowest response rate (36%). Note also that two respondents failed to provide their organization affiliation.

Table 1. Number of Survey Responses

Respondent	Number of Surveys Sent	Number of Surveys Received	Response Rate
Cities > 5,000	89	55	62%
Cities 2,000–5,000	78	28	36%
Cities < 2,000	100	73	73%
Counties	99	76	74%
State agencies (Iowa Board of Regents, Iowa DNR, Iowa DOT, state correctional facilities)	12	12	100%
Unidentified respondents	—	2	—
Total	378	246	65%

Most of the respondents for the cities were the directors of public works, city administrators, street superintendents, or city clerks (refer to Tables 2–4). A few surveys in each city classification did not identify the respondent title. It appeared that cities with populations greater than 5,000 had the greatest variety of respondent titles—many of them were simply categorized as “Other” in order to shorten the list for this study.

Table 2. Respondent Profile for Cities Greater Than 5,000

Respondent Title	Number	Percent of Total
Director of Public Works	11	20.0%
Street Superintendent	8	14.5%
City Engineer	5	9.0%
City Administrator	3	5.5%
City Clerk	3	5.5%
Public Services Superintendent	3	5.5%
Street Commissioner	2	3.5%
Other	17	31.0%
Unidentified respondent	3	5.5%
Total	55	100.0%

Table 3. Respondent Profile for Cities 2,000–5,000

Respondent Title	Number	Percent of Total
Director of Public Works	10	35.7%
City Administrator	4	14.3%
City Clerk	3	10.6%
Street Superintendent	2	7.1%
Building and Grounds Supervisor	1	3.6%
City Engineer	1	3.6%
City Manager	1	3.6%
Director of Public Property	1	3.6%
Mayor	1	3.6%
Street Sanitation Supervisor	1	3.6%
Unidentified respondent	3	10.7%
Total	28	100.0%

Table 4. Respondent Profile for Cities Less Than 2,000

Respondent Title	Number	Percent of Total
City Clerk	45	61.6%
Maintenance (superintendent, city, supervisor, municipal)	9	12.4%
Superintendent (municipal, city, public works, street)	8	11.0%
Director of Public Works	5	6.8%
Mayor	5	6.8%
Street Foreman	1	1.4%
Total	73	100.0%

County engineers and their assistants comprised approximately 65% of respondents representing the counties, as shown in Table 5. Note that four of the computer disks were damaged during return mailing and the researchers were unable to obtain another copy of the survey from those counties.

The respondent profiles for the state agencies that received road use tax funds—the Iowa Board of Regents, Iowa DNR, Iowa DOT, and state correctional facilities—are provided in Table 6.

Table 5. Respondent Profile for Counties

Respondent Title	Number	Percent of Total
County Engineer	49	64.5%
Assistant to Engineer	8	10.5%
Maintenance Superintendent	6	8.0%
Shop Foreman/Manager	5	7.0%
Inventory Control Supervisor	1	1.0%
Office Manager	1	1.0%
Road Maintenance Supervisor	1	1.0%
Unidentified respondent	5	7.0%
Total	76	100.0%

Table 6. Respondent Profile for State Agencies

Agency	Respondent Title
Iowa Board of Regents	Assistant Director, Business and Finance
Iowa DNR	Director
Iowa DOT	Manager, Equipment Services
Anamosa State Penitentiary	Associate Warden
Clarinda Correctional Facility	Assistant Business Manager
Fort Dodge Correctional Facility	Financial Services Manager
Iowa Correctional Facility	Director, Operations Manager
Iowa State Penitentiary	Correctional Trades Leader
Mount Pleasant Correctional Facility	Business Manager
Newton Correctional Facility	Maintenance Repair Supervisor
North Central Correctional Facility	Operations Manager
Oakdale Department of Corrections	Business Manager

Equipment Purchasing Characteristics

Table 7 shows the number of equipment pieces purchased or leased. Note that a small percentage of respondents did not specify the method of acquisition (refer to cities greater than 5,000 and counties). For the most part, equipment is purchased by all the responding organizations with a small percentage associated with leasing. All respondents reported that approximately 99% of their equipment is purchased as opposed to leased. A breakdown is provided for each of the organization categories. It is interesting to note that the Iowa Board of Regents and Iowa DNR stated that they did not use road use tax funds to purchase equipment; the Iowa Board of Regents and Iowa DNR survey responses are therefore not included in the remaining discussion and tables.

Table 7. Number of Pieces of Equipment Purchased or Leased

Respondent Type	Number Purchased (Percent of Total)	Number Leased (Percent of Total)	Number Unspecified (Percent of Total)	Total
All entities surveyed	9,094 (98.7%)	98 (1.1%)	25 (0.20%)	9,217
Cities > 5,000	1,558 (96.9%)	25 (1.6%)	24 (1.5%)	1,607
Cities 2,000–5,000	320 (99.07%)	3 (0.93%)	0 (0.0%)	323
Cities < 2,000	209 (100%)	0 (0.0%)	0 (0.0%)	209
Counties	4,218 (99.4%)	24 (0.57%)	1 (0.03%)	4,243
Iowa DOT	2,719 (98.4%)	43 (0.6%)	0 (0.0%)	2,762
State correctional facilities	29 (96.7%)	1 (0.3%)	0 (0.0%)	30

Table 8 reveals the method for purchasing the equipment. For the most part, equipment is purchased through a formal bidding process (as indicated by 70.4% of all respondents). Approximately 16% is purchased using a direct purchase approach. It appears that smaller entities such as cities with populations less than 2,000 and correctional facilities purchase a large percentage of their equipment used. This seems like a reasonable approach since their budgets are most likely smaller for equipment procurement.

Table 8. Procurement Method for Purchasing Equipment

Respondent Type	Formal Bid	Direct Purchase	Existing Contract	Purchased Used	Unspecified
All entities surveyed	70.4%	15.5%	4.6%	8.2%	1.3%
Cities > 5,000	76.9%	9.2%	2.9%	9.0%	2.0%
Cities 2,000–5,000	48.4%	22.8%	0.0%	26.6%	2.2%
Cities < 2,000	16.7%	37.3%	0.0%	38.8%	7.2%
Counties	61.4%	26.1%	1.3%	9.8%	1.4%
Iowa DOT	87.6%	0.2%	11.8%	0.4%	0.0%
State correctional facilities	44.8%	3.5%	0.0%	51.7%	0.0%

Table 9 shows the procurement methods for leasing equipment. Most of the equipment (58.2%) is leased on a short-term (less than six months) basis. Approximately 28% of those leasing do so with a long-term no maintenance agreement. It is interesting to note that 88% of the cities with populations greater than 5,000 leased equipment with a long-term maintenance agreement. This is probably due to the extensive use requirements for the equipment.

Table 9. Procurement Method for Leasing Equipment

Respondent Type	Short Term	Long Term with Maintenance Agreement	Long Term, No Maintenance Agreement	Unspecified
All entities surveyed	58.2%	7.1%	27.6%	7.1%
Cities > 5,000	0.0%	88.0%	12.0%	0.0%
Cities 2,000–5,000	0.0%	0.0%	100.0%	0.0%
Cities < 2,000	0.0%	0.0%	0.0%	0.0%
Counties	37.5%	25.0%	8.3%	29.2%
Iowa DOT	100.0%	0.0%	0.0%	0.0%
State correctional facilities	100.0%	0.0%	0.0%	0.0%

Equipment Types Used

Tables 10–15 show equipment profile distributions for all respondents by their respective organization. An important point to make is that these results do not constitute a complete inventory of equipment owned by all transportation entities using road use tax funds—this is merely a survey.

Note that the three most common pieces of equipment for cities with populations over 5,000 are the single-axle dump body trucks, 2 cy+ wheel loaders, and 125-200 CFM air compressors. It is interesting to note that the >135 HP motor grader was the most commonly owned piece of equipment for the counties, followed by the single-axle dump body truck.

Equipment below one percent is listed below each profile distribution table. Four cities with populations 2,000–5,000 did not purchase any equipment using road use tax funds; 29 cities with populations less than 2,000 in population had no equipment purchased using road use tax funds.

Table 10. Owned Equipment Distribution for Cities Greater Than 5,000

Type of Equipment	Percent Owned
Single Axle Dump Body	24.5%
Wheel Loader, 2 cy +	4.0%
Air Compressor, 125-200 CFM	3.7%
Tandem Axle Dump Body	3.5%
Motor Grader, >135 HP	3.5%
Tractor Loader-Backhoe	3.3%
Concrete Saw	3.3%
Snow Blower Attachment	2.6%
Sweeper, 3 Wheel Mechanical	2.6%
Single Axle Flatbed	2.4%
Skid Steer Loader, Wheel or Track	2.4%
Motor Grader, 135 HP or less	2.3%
Breaker Pavement, Attachment	2.3%
Mowing Tractor, <45 HP	2.1%
Drum Roller, 40-67"	2.1%
Brush Chipper	2.1%

Breaker Pavement Attachment	1.1%
Other*	<1.0%

* Single Axle Flatbed; Tractor Loader-Backhoe; Drum Roller 40–67”; Semi-Tractor Trailer, Low Bed Semi; Skid Steer Loader, Wheel or Track; Machine, Asphalt Patcher; Milling Head; Brush Chipper; Filler, Crack; Pump, Mud Paddle/Colloidal; Saw, Concrete; Single Axle van body; Platform Boom (High-Reach); Loader Crawler 80 HP or less; Fully Equipped Paint Truck; Air Compressor 200+ CFM; Hydraulic Wheeled <1 cy; Vertical Drill; Tandem Axle Flatbed; Salt Conveyor; Signal, Speed Sensing Trailer Mtd.; Trailer, Van; Rubber Tire Roller 9 Wheel; Sweeper, 4 Wheel Mechanical; Bridge Inspection Unit; Hydraulic Crawler <1 cy; Drum Roller 67+”; Wheel Loader 2 cy +; Road Rating Machine; Sweeper Attachment; Asphalt, Main Screed > 10 ft; Dragline 1/2 cy or less; Driver, Pile or Pipe; Grapple Attachment, Loader; Machine, Slurry; Hydro-Seeder; Machine, Gunite; Profiler Machine; Centerline Paint Marker; Asphalt Spreader Miller; Bitumen Recycler Mixer; Asphalt Pump; Tree Spade; Power Rake Tiller; Belly Dump Trailer.

Leased equipment for the Iowa DOT included Mowing Tractor 65+ HP, Drum Roller 40-67”, Drum Roller 67+”, Asphalt Main Screed >10 ft, and Dump Body Trailer.

Table 15. Owned Equipment Distribution for State Correctional Facilities

Type of Equipment	Percent Owned
Single Axle Dump Body	15.6%
Single Axle Van Body	12.5%
Mowing Tractor, <45 HP	12.5%
Skid Steer Loader, Wheel or Track	9.4%
Wheel Loader, 2 cy or less	6.3%
Mowing Tractor, 45-65 HP	6.3%
Tractor Loader-Backhoe	6.3%
Air Compressor, 125-200 CFM	6.3%
Single Axle Flatbed	3.1%
Platform Boom (High-Reach)	3.1%
Wheel Loader, 2 cy +	3.1%
Mowing Tractor, 65+ HP	3.1%
Brush Chipper	3.1%
Other*	<1.0%

* None.

Leased equipment for state correctional facilities included Sewer Jet.

Equipment Use: Maintenance versus Construction

Table 16 demonstrates the percent use of equipment for purposes of maintenance or construction. It is clear to see that most of the equipment used by all respondents was used for maintenance (94.1%). Only approximately 5.9% of the respondents used the equipment for construction purposes. The Iowa DOT uses their equipment almost exclusively for maintenance (99.7%).

It should also be noted that equipment was used for purposes other than maintenance or construction. One respondent mentioned that their county used a trailer van for collecting items to be recycled. Other respondents did not identify for what other purpose the equipment was used for.

Table 16. Percentage of Use for Maintenance and Construction

Respondent Type	Maintenance	Construction	Other
All entities surveyed	94.10%	5.86%	0.04%
Cities > 5,000	91.90%	8.10%	0.00%
Cities 2,000–5,000	89.30%	10.70%	0.00%
Cities < 2,000	95.90%	3.70%	0.40%
Counties	91.30%	8.60%	0.10%
Iowa DOT	99.70%	0.30%	0.00%
State correctional facilities	86.50%	13.50%	0.00%

Table 17 identifies equipment used for construction purposes greater than or equal to 50% of the time. As can be expected, equipment such as asphalt pavers and road mixers would be primarily used for construction.

Table 17. Equipment with Greatest Construction Usage

Respondent Type	Type of Equipment	Percent Construction Use
Cities > 5,000	Road Mixer	80%
	Water Tank Attachment	75%
	Vac-Con Sewer Jet Vacuum	50%
	Trailer, Tandem 12k	50%
	Trailer, Tandem 6k	50%
Cities 2,000–5,000	Asphalt Paver, Main Screed 10 ft or less	100%
	Trailer, Low Bed 15 Ton	100%
	Tree Spade	80%
	Power Rake Tiller	60%
Cities < 2,000	None	—
Counties	Single Axle Truck - Utility Box	100%
	Welder Generator	100%
	Crawler Tractor, 450 HP	75%
	3/4 Ton Window Van	70%
	Single Axle Truck - Bridge Crew	55%
	Single Axle Truck, Welder	50%
	6" Pump	50%
Iowa DOT	Road Rating Machine	50%
State correctional facilities	Air Compressor, 125-200 CFM	50%

Equipment Efficiency Usage

The survey allowed the researchers to determine the percentage usage of equipment if the respondents completed the worksheet (refer to the survey in Appendix B). This was calculated using a seasonal approach and equipment equivalents. Respondents were asked to indicate the equipment equivalents for each season for a group of similar equipment (e.g., single-axle dump body trucks). If the total number of equipment was 10, for example, then the maximum equipment equivalent value would be 40 (4 seasons x 10). If the respondent only used 30 equipment equivalents for all four seasons, then the efficiency would be 75% (30/40). Note that this is a very approximate method for determining equipment efficiency. A more rigorous approach would have required a more detailed accounting for each piece of equipment. It was decided early on that this more detailed approach was beyond the scope of this study. In addition, these results should be used with caution since, in general, a small percentage of respondents provided this information. Table 18 shows data related to the average percent of equipment usage.

Table 18. Equipment Usage

Respondent Type	Number of Pieces of Equipment Reported (Percent of Total)	Minimum Usage	Maximum Usage	Average Percent of Equipment Usage
Cities > 5,000	540 (34%)	17%	100%	81%
Cities 2,000–5,000	78 (24%)	25%	100%	88%
Cities < 2,000	29 (14%)	25%	100%	42%
Counties	540 (13%)	2.5%	100%	88%
Iowa DOT	2,762 (100%)	75%	100%	92%
State correctional facilities	28 (93%)	25%	100%	92%

Respondent Comments

Part 2 of the survey asked respondents for innovative suggestions or good practices for equipment procurement and use. Respondent comments are listed below by their respective entity classification.

Cities with Populations Greater Than 5,000

- I believe organizations/individual needs differ a great deal. Equipment specifications are a must to guaranty your organizations satisfaction in usage and cost of the equipment you purchase.
- Get input from the employees who use the equipment. Be sure you do research and get everything in your specs.

- Hours and age are used for equipment procurement and use.
- The department policy is to spec. equipment and get quotations from two if not three equipment dealers.
- We almost always get sealed bids, unless we purchase equipment on an Iowa DOT contract.
- Equipment owned 40+ years by city.

Cities with Populations 2,000–5,000

- Buy used from the Iowa DOT in Ames. Piggyback on state bids. Competitive bids.

Cities with Populations Less Than 2,000

- Use option tax to purchase equipment.
- We purchase used equipment, first checking with the Iowa DOT in Ames and second with local surrounding dealers, comparing trade-in and purchase prices.
- We buy most of our equipment through the state yard or surplus property.
- Since we are a small community we have to buy used equipment. Thus we have to have a good maintenance program—servicing our old equipment. Simply routine maintenance, know your equipment, a watchful eye and keep sheltered if possible.
- Our community utilizes our tractor for multi-purposes. We mow large areas of land around drainage ditches and lagoon but also use it to push snow and load snow. We borrow extra attachments and keep our cost down by buying good used attachments. We do the same with our dump truck, which is multi-use. The Buchanan County Road Department and Buchanan County Conservation share their equipment on a need policy for short-term projects.

Counties

- We do like the opportunities to be included in Iowa DOT equipment purchases. (1) Majority of machines are CAT (maintainers, dozers) or J.D. (hoes, mowers, loaders), which cuts back on filters, hoses, specialty tools, etc. in maintenance of machines. (2) Integrated tool carrier is end loader/all terrain forklift.
- I feel that counties benefit greatly through ability to direct purchase option. Disagree with state acceptance of low bid quotes as I do not feel the public is getting the long-term benefit/use that may be achieved with another option. That is, maintenance costs, repair costs, trade-in values are very important in calculating the total cost to the public for a piece of equipment.
- Cleanliness, good service, oil samples, think safety and walk around inspections before starting equipment.
- Only buy what you can use for more than six months and rent equipment from dealer or borrow from another county by trading equipment around.
- Taking the cheapest bid is not necessarily the best. Our machines are bought for the long term, therefore parts and service should be considered. Only quality machines should be bid.

- (1) Sharing equipment with border counties. (2) Buy American equipment. (3) Joint purchasing power. (4) Web site for all government surplus equipment.
- Let home rule work!
- All trucks are capable at functioning as snow removal units except for some tractors, pickups, and one-ton trucks. We have two tandem-axle trucks equipped with a stellar hook lift unit that helped replace a flatbed, water truck, and slide in material spreader with modular units that can be shared between trucks.
- Do not allow deviations from specifications by formal bidders. Direct purchase will often allow consideration of warranty work, availability of options at little or no cost and preclude the necessity of making specifications fit all bidders.
- Lowest price is not always a good thing. Let your operators have some input.
- Purchase with neighboring county for low-use machines.

State Agencies That Receive Road Use Tax Moneys

- No comments.

CONCLUSIONS AND RECOMMENDATIONS

Conclusions

Results show that most of the purchased equipment is used primarily for maintenance (94%). Approximately 5.6% of the equipment is for construction. Most of the equipment is purchased instead of leased (99% versus 1%). Procurement policies depend on the responding organization. For example, larger agencies tend to use a formal bid approach as opposed to smaller cities that purchase equipment used. Efficiency of use seemed to be relatively high with usage percentages around 80% on average. Smaller cities had lower efficiency percentages.

Recommendations

A few recommendations are provided to enhance the procurement process for agencies receiving road use tax funds:

- In order to encourage equipment sharing between agencies, a list of equipment could be made available from each so that other entities can have access. This could increase the equipment utilization rates by all entities. For smaller cities in particular equipment sharing might be one way to increase efficiency.
- Another recommendation is for entities to consider using lowest life-cycle cost instead of lowest initial bid price as the basis for procurement selection.

APPENDIX A

**2001 Iowa Acts, Chapter 32, Section 12, Subsections 1 and 2
(House File 324, 2001 Session)**

2001 IOWA ACTS, CHAPTER 32, SECTION 12—DEPARTMENT REVIEW OF CERTAIN HIGHWAY PROJECT PROCEDURES AND EQUIPMENT USE—RULES

Subsection 1

The rules adopted by the department pursuant to section 314.1A, as enacted in this Act, shall be in draft form prior to December 31, 2002, and shall specifically define the terms “construction”, “reconstruction”, “improvement”, and “repair or maintenance” as such terms relate to highway, bridge, and culvert projects.

“*Construction*” means the building or development of a road, street, bridge, or culvert in a new location when (1) the new location deviates substantially from the existing alignment and (2) the result is an entirely new road or street for the greater part of the length of the project.

“*Reconstruction*” means a significant change to the existing type of road, street, bridge, or culvert or its geometric or structural features. Some realignment and the use of current design criteria may be involved.

“*Improvement*” means a betterment to a road, street, bridge, or culvert. The work increases the value of the facility and enhances the facility, its traffic operations or its safety beyond the original design. The work would be so extensive as to be classified as construction or reconstruction, but it could involve rehabilitation, restoration, or resurfacing (3R) work.

“*Repair or maintenance*” means the preservation of a road, street, bridge, or culvert so that it is in sound or proper condition. The work may include minor replacements and additions necessary to restore the road, street, bridge, or culvert to its originally built condition with essentially the same design.

Subsection 2

The department shall review the highway and street construction and maintenance equipment procurement policies and the use of such equipment by all entities receiving road use tax fund moneys. The department shall report its findings, and any recommendations regarding potential efficiencies and cost savings in the procurement and use of such equipment, to the general assembly by December 31, 2002. The department shall consult with public and private entities in reviewing the procurement policies and use of equipment and in formulating the department’s recommendations.

MEMORANDUM TO PUBLIC AND PRIVATE ENTITIES

FROM: Mark F. Wandro, Director 

SUBJECT: Survey of Equipment Procurement Policies

House File 324, Section 12, as passed by the Iowa General Assembly in the 2000-2001 session, required the Iowa Department of Transportation (DOT) to conduct a study of all Iowa entities receiving road use tax funds to determine how they procure and use highway and street construction and maintenance equipment. The report is due to the Legislature by December 31, 2002.

To gather the needed equipment procurement information, the DOT has retained Iowa State University's Center for Transportation Research and Education (CTRE). The enclosed survey was developed with input and guidance from the following people:

John Klostermann, Street/Sewer Maintenance Supervisor, City of Dubuque
Larry Mattusch, Scott County Engineer
Dwayne McAninch, President, McAninch Corporation
Larry Jesse, Director, DOT Office of Local Systems
Carol Coates, Director, DOT Office of Procurement and Distribution

I am requesting your cooperation in providing the information needed to report to the Legislature. This survey is *not* related to development of a standardized purchasing policy. It is being sent to officials in all 99 counties, all cities with a population greater than 5,000, a total of 100 randomly selected cities with a population between 2,000 and 4,999, a total of 100 randomly selected cities with a population less than 2,000, the Iowa Department of Natural Resources, the Iowa Department of Corrections, and the Board of Regents.

A paper copy of the survey and a diskette with an electronic version are enclosed, along with the definitions and instructions. The Excel spreadsheet includes imbedded equations that will help you estimate equipment usage consistently. Please complete and return either the paper or electronic survey by Friday, March 1, 2002. A stamped, self-addressed envelope is also enclosed.

January 28, 2002

Survey Definitions

Equipment: self propelled equipment and non-self propelled equipment (listed separately in the survey, and not including snow and ice control equipment or truck bodies) *with a purchase or replacement value of more than \$5,000.*

If a category of equipment that you own or lease is not included, please add it at the end of the self propelled or non-self propelled equipment list, as appropriate.

Maintenance: preservation of a road, street, bridge, or culvert so that it is in sound or proper condition. For purposes of the survey, maintenance includes

- minor repair, replacements, and additions necessary to restore the road, street, bridge, or culvert to its originally built condition with essentially the same design, and
- removal of snow and ice from roadways and other winter maintenance activities.

Construction: improvement, reconstruction, or new construction of a road, street, bridge, or culvert. For purposes of the survey, construction includes

- work that increases the value of the facility and enhances the facility, its traffic operations, or its safety beyond the original design and may involve rehabilitation, restoration, or resurfacing (3R) type projects;
- work that significantly changes the existing type of road, street, bridge, or culvert or its geometric and structural features and may involve some realignment and use of current design criteria; and
- the building or development of a road, street, bridge, or culvert in a new location when the new location deviates substantially from the existing alignment and the result is an entirely new road or street for the greater part of the length involved.

Equipment equivalent (see Worksheet and Worksheet Instructions, pages 4–5 of these instructions): the number of pieces of equipment **in use**.

Survey Instructions

These instructions apply to both versions of the survey. If you have questions about the Excel version, contact Ali Kamyab, 515-294-4303, kmb@iastate.edu. If you have questions about completing the paper survey, contact Ed Jaselskis, 515-294-0250 or -0727, ejaselsk@iastate.edu.

Special notes regarding the Excel file:

1. The electronic survey is provided in Microsoft Excel 2000 format. If you cannot open the file, we may be able to provide a different format. Contact Ali Kamyab, 515-294-4303, kmb@iastate.edu.
2. To move between Parts 1, 2, and 3 of the survey, click on the appropriate tab at the bottom of the spreadsheet.

Part 1. Equipment Procurement and Use Information

Column 1: On the paper survey, enter the number of pieces of equipment that your organization owned in 2001; that is, equipment for which you have title or a sales receipt on file. If none, leave columns 1–5 blank. (On the Excel survey, leave column 1 blank; a formula in the spreadsheet will calculate this total.)

Columns 2, 3, 4, and 5: Of the number owned in 2001 (column 1), enter the number of new pieces purchased through (2) formal bid, (3) direct purchase, or (4) an existing contract, respectively, and then the number (5) purchased used.

(2) Formal bid: New equipment was purchased through a formal bidding process in which specifications were issued and competitive bids were formally received and opened.

(3) Direct purchase: New equipment was purchased without going through a bidding process. Informal price quotations may have been requested or new equipment purchased from a typical supplier.

(4) Existing contract: New equipment was purchased through state contract or other cooperative, volume purchase arrangement.

(5) Purchased used: Used equipment was purchased directly or at auction.

Column 6: On the paper survey, enter the number of pieces of equipment that your organization leased in 2001; that is, equipment for which you have a lease or rental contract. If none, leave columns 6 through 9 blank. (On the Excel survey, leave column 6 blank; a formula in the spreadsheet will calculate this total.)

Columns 7, 8, and 9: Of the number leased in 2001 (column 6), enter the number of pieces (7) leased for more than six months with a maintenance contract, (8) leased for more than six months with no maintenance contract, and (9) rented for six months or less, respectively.

Column 10: Enter the total number of pieces of equipment; that is, add number owned (column 1) and number leased (column 6). (The Excel spreadsheet calculates this total.)

Columns 11 and 12: For the total pieces of equipment (column 10), enter estimated “percents of use” for (11) maintenance and for (12) construction, respectively, in 2001.

Note: These percents should reflect only equipment *in use* (not idle) in 2001. The percents in columns 11 and 12 for each item of equipment *must total 100*.

Note about Worksheet: The attached Worksheet (page 4) with instructions (page 5) might help you estimate “percents of use.” If you use the Worksheet in the Excel file, the Worksheet will automatically calculate percents of use for you; click on the field under “Click to Calculate Percent Use” and complete the electronic Worksheet as described in the instructions (page 5).

Use the Worksheet only if you find it helpful. You can estimate the percents and enter them in columns 11 and 12 without the Worksheet on both the paper and Excel versions of the survey.

Part 2. Innovative Suggestions or Good Practices for Equipment Procurement and Use
Provide any suggestions or good practices regarding equipment procurement and use that you would recommend to others (on the survey form).

Part 3. Respondent Information

Please include this information on the survey form. It will be useful if we need to follow up on any of your responses.

Return the completed survey in the enclosed self-addressed, stamped envelope or diskette mailer.

Please keep a back-up copy.

**Worksheet
for Determining Percents of Use
(columns 11 and 12)**

Note: If you can estimate annual percents of use without the Worksheet below (also available on the Excel file), **that's fine.** However, you may find the Worksheet helpful because it will help you adjust for seasonal variations in equipment use. The instructions on the following page are the same for both the paper and Excel Worksheets.

If you use the following Worksheet to complete the paper survey, first make enough copies for all categories of equipment your organization leased or owned in 2001.

Equipment Line No.: _____ Equipment Description: _____

	Equipment Equivalents (by Use)		Total Equip. Equiv. (each season total cannot exceed total no. of pieces of equipment in the category)
	Maintenance	Construction	
Winter			
Spring			
Summer			
Fall			
Total	(a)	(b)	(c)

Maintenance Percent of Use =
(Total Maintenance Equip. Equiv. (a) divided by Total Equip. Equiv. (c) x 100

Construction Percent of Use =
(Total Construction Equip. Equiv. (b) divided by Total Equip. Equiv. (c) x 100

Worksheet Instructions

The Worksheet uses the concept of “equipment equivalents.” An equipment equivalent is the number of pieces of equipment **in use**. It can be a whole number or a fraction (e.g., 1 or 1.5). A zero indicates equipment has been idle. Use your “best guess” estimates.

On the Worksheet for each category of equipment,

1. Enter estimated equipment equivalents in the maintenance column and the construction column for each season.
2. Total the equipment equivalents for each season (each row). (**Note: Each seasonal total cannot exceed the number of pieces of equipment in the category.**)
3. Total the column of equipment equivalents for (a) maintenance and for (b) construction. Total the (c) seasonal equipment equivalents.
4. Calculate maintenance percent of use = $a/c \times 100$.
Calculate construction percent of use = $b/c \times 100$.

Enter these percentages in columns 11 and 12, respectively, on the survey.

(Excel will calculate the percents and enter them in columns 11 and 12.)

Sample Worksheet

In the following example, an organization had 10 single-axle, dump body trucks in 2001. The estimated number of equipment equivalents has been entered in each use category by season. In winter, for example, all 10 trucks were used for maintenance; in summer, 8 were used for construction. Zeros indicate no equipment was used for that purpose. In this example, the most each row (season) can add up to is 10. (If the organization had 20 single-axle, dump body trucks, the maximum would be 20.)

Equipment Line No.: **1** Equipment Description: **Trucks, single axle, dump body**

	Equipment Equivalents (by Use)		Total Equip. Equiv. (each season total cannot exceed total no. of pieces of equipment in the category)
	Maintenance	Construction	
Winter	10	0	10
Spring	8	2	10
Summer	2	8	10
Fall	5	3	8
Total	(a) 25	(b) 13	(c) 38

Maintenance Percent of Use = $25/38$, or **66** percent.

(Total Maintenance Equip. Equiv. (a) divided by Total Equip. Equiv. (c)) x 100

Construction Percent of Use = $13/38$, or **34** percent.

(Total Construction Equip. Equiv. (b) divided by Total Equip. Equiv. (c)) x 100
